

NGUYEN HUU PHU

Python / Backend Developer

Email: nguyenuhuuphu190502004@gmail.com | **Phone:** 0962954690 | **DOB:** 19/05/2004

Location: Cau Giay, Hanoi | **GitHub:** <https://github.com/phunhph> | **English:** Professional Working Proficiency (Technical reading, written communication & chat)

PROFILE

Detail-oriented Backend Developer with **~2 years of hands-on experience** specializing in building, securing, and optimizing scalable web APIs and backend architectures, with a strong focus on **Python (Flask, FastAPI) and C# .NET**. Certified Microsoft Power Platform Developer (PL-400) with a proven track record of designing high-concurrency backend services, implementing robust authentication (JWT/OAuth 2.0), and integrating AI-driven pipelines (NLP, document scanners). Passionate about writing clean, maintainable code, tuning database performance, and automating DevOps workflows.

SKILLS

- **Programming Languages:** Python, C#, SQL, JavaScript/TypeScript, PHP
 - **Python Frameworks & Libraries:** Flask, FastAPI, Pandas, NumPy, PDFPlumber/PyPDF, Scikit-learn (ML matching), JWT, SQLAlchemy, PyTest
 - **Backend & Enterprise Tech:** ASP.NET Core, EF Core, Node.js (Express), Dataverse, Power Automate
 - **Databases & Storage:** PostgreSQL, MySQL, SQL Server, MongoDB, AWS S3
 - **API Design & Security:** RESTful APIs, Role-Based Access Control (RBAC), JWT, OAuth 2.0
 - **DevOps, Cloud & Tools:** Docker, Docker Compose, Nginx (Reverse Proxy, Load Balancing), GitLab CI, GitHub Actions, Linux VPS, Git
-

WORK EXPERIENCE

HBLAB Joint Stock Company | Backend Developer | May 2025 – Present

MIESArchitectX (Jul 2025 – Nov 2025)

Tech Stack: .NET Core, EF Core, SQL Server

- **Architected and developed high-performance REST APIs** to handle complex business logic and entity relations for real estate and architectural asset management.
- **Optimized SQL Server database performance** by writing efficient EF Core Linq queries, creating indexing strategies, and executing clean migrations.
- **Collaborated on frontend integrations** to ensure smooth, secure data binding and interactive dashboard functionality.

CRM Internal (Dec 2025 – Present)

Tech Stack: .NET, Power Platform, Power Apps, Power Automate, Dataverse

- **Engineered secure bridge integrations** and data synchronization pipelines between internal backend microservices and the Microsoft Power Platform ecosystem.
- **Designed custom canvas & model-driven Power Apps** and structured automated workflows (Power Automate), improving business process efficiency by 40%.
- **Developed custom API connectors and server-side plugins** in C# to extend default Dataverse functionalities.

247 Technical | Python / Backend Developer | May 2024 – May 2025

- **Menas (HR System):**
 - **Engineered secure Python Flask REST APIs** for the internal HR system, managing sensitive payroll and employee data.
 - **Implemented robust authentication & authorization** protocols utilizing JWT-based access tokens and strict server-side validation.
 - **Integrated APIs** with a responsive Flutter mobile application, ensuring secure, low-latency mobile access to HR data.
- **Tour Vietnam Airlines:**
 - **Co-developed modular backend APIs** using Python (Flask) and Node.js to support full-stack travel reservation flows.
 - **Conducted query optimizations and memory profiling** on the backend services, improving database response times and reducing server resource utilization by 25%.

Freelance | Python / Backend Developer | Sep 2023 – May 2025

- **AI-Driven Backends & Microservices** (2025 – Present):
 - **Developed and launched high-concurrency Python AI backends** served via REST endpoints (FastAPI/Flask) for plagiarism scanning and PDF document analysis.
 - **Engineered an NLP-based career-matching engine** using Python machine learning libraries (Scikit-learn, Pandas) to match user resumes with job listings in real-time.
 - **Optimized AI processing pipelines** using asynchronous task handling and multithreading, ensuring fast response times under concurrent loads.
- **Exam System Upgrade** (Nov 2025 – Jan 2026):
 - **Refactored legacy API codebases** (Laravel/Express) and Nginx reverse proxy configurations to handle massive spikes in examination traffic.
 - **Designed a background-queued data migration tool** in Node.js/Python that securely streamed large assets from AWS S3 to Google Drive API, cutting storage costs by 50%.
- **School Management Platform** (Sep 2023 – May 2025):
 - **Designed and implemented a robust MySQL database schema** and Express REST APIs.
 - **Configured fine-grained Role-Based Access Control (RBAC)** and a real-time notification engine for over 500+ active student and teacher profiles.

OTHER PROJECTS

- **Student Capacity Exam (Node.js & Express):** Refactored and optimized backend delivery engines to support high-concurrency online exams under heavy traffic.

- **PVF Management (PHP):** Developed core administrative APIs, audit trails, and structured system documentation.
-

EDUCATION & CERTIFICATIONS

- **FPT Polytechnic College** (2022 – 2024)
 - **Major:** Website Programming (Graduated) | **GPA:** 3.8 / 4.0
 - **Honors:** Ranked in Top 100 outstanding students; Won 2nd Prize in the FPT Self-Driving Car Competition.
- **Microsoft Certified:** Power Platform Developer Associate (**PL-400**)
